- Analyse and optimise end-to-end client lifecycle processes across Business Banking, with exposure to client onboarding, account servicing, card orders, client service and account maintenance.
- Evaluate current-state processes to identify process inefficiencies, service gaps, control weaknesses and opportunities for digital and operational improvement.
- Collaborate with Business, Operations, Technology, Risk, Compliance and other stakeholders to understand business needs and translate them into practical process and system requirements.
- Facilitate stakeholder interviews and workshops, conduct process and document analysis, and develop current- and future-state process models using BPMN and value-stream mapping techniques.
- Develop business requirements, user stories and acceptance criteria to support technology-enabled process improvements and ensure solutions align with business and operational requirements.
- Support the design and refinement of standard operating procedures, process controls and operating practices within a highly regulated banking environment.
- Apply knowledge of FICA, CDD, EDD, client due diligence, risk controls and regulatory requirements when analysing and improving customer and account-related processes.
- Work with stakeholders to identify opportunities to improve client information management, data quality, process visibility and operational reporting.
- Analysed operational process performance and customer journey data to find bottlenecks, turnaround-time issues, SLA risks.
- Supported user acceptance testing by defining test scenarios validating business requirements.
- Contribute to the development of scalable process solutions by considering people, processes, systems, data, controls and customer experience across the end-to-end journey.
- Engage with stakeholders to resolve process issues, clarify requirements and align business and technology teams on proposed solutions.

Junior Business Analyst

Sasfin Bank | Johannesburg, South Africa | Sep 2022 - Mar 2025

- Documented process flows and created user manuals to support effective change management.

- Wrote new manuals, definitions and SOPs guiding individual job titles on expectations and processes.
- Collaborated with cross-functional teams to design and deploy IT solutions aligned with business objectives.
- Analysed business requirements and translated them into technical specifications for IT projects.
- Supported the implementation of change management initiatives, minimising disruption and promoting user adoption.
- Wrote detailed test scenarios and cases, accurately logging errors and defects in comprehensive test reports.
- Facilitated requirements-gathering sessions to identify stakeholder needs and expectations. and JAD workshops to collect stakeholder needs and inputs.
- Read and interpret entity relationship diagrams, maintaining accurate database data integrity.

Operations Specialist

Bolt South Africa | Johannesburg, South Africa | Jan 2021 - Aug 2022

- Analyze supply metrics and ride trends to identify performance bottlenecks.
- Built dashboards and reports presenting actionable insights for stakeholders to use.
- Develop data-driven strategies to improve driver retention and operational efficiency.
- Investigated driver engagement and retention amid marketplace challenges to support ride performance.
- Collected and validated driver and ride data from internal systems.
- Supported adoption of data-driven approaches to optimize ride-hailing operations.

Data Capturer

Shell Energy | Johannesburg, South Africa | Feb 2020 - Sep 2020

- Converted paper data into database systems, maintaining accuracy and improving accessibility.
- Monitored data entry processes, identifying improvement areas and refining workflows.
- Reviewed data entries to detect inaccuracies in data entry and document issues.

- Examined data to identify deficiencies or errors and rectify issues promptly.
- Reviewed data entries to detect inaccuracies in data entry processes.

Graduate Software Developer

Infomage Rims Group | Jan 2019 - Jan 2020

- Utilised advanced C#, SQL, and Python knowledge to build scalable solutions.
- Coded software updates to add new features, close security holes and resolve defects.
- Conducted unit and integration testing to identify and resolve defects.
- Collaborated with development team in requirement analysis for new feature implementation, ensuring clarity and feasibility.
- Contributed to project planning and requirement analysis for Skillzbook and Sigma7 LMS platforms, enhancing feature alignment with user needs.
- Maintained clear, concise documentation of development activities, code changes, feature updates.
