SKILLS

BUSINESS ANALYSIS

Requirements elicitation · BRDs & user stories · Business cases · Systems analysis · Gap analysis · Workshops & JAD · Change management · Jira & Confluence

PROCESS & CONTROLS

SOP development · Process optimisation · Root-cause analysis · Process controls · BPMN (L0–L4) · Value stream mapping · Visio · FICA, CDD & EDD · Regulatory compliance · Risk management

TESTING

UAT · Test scenarios & cases · Acceptance criteria · Defect management · Business sign-off

Ntiyiso Wayne Ndhlovu

Business Analyst · Process & Operational Analysis

People · **Process** · **Technology**

Profile

I'm a Business Analyst at African Bank, focused on processes and operations. I approach the work through people, process and technology: who does the work, how it flows, and which systems support it. I've been a BA in banking for four years. Before that I worked in operations at Bolt, and I started out as a software developer after studying Computer Science and Informatics at the University of Johannesburg.

Experience

Business Analyst, Process & Operational Analysis

Mar 2025 – Present

African Bank · Midrand · Business & Commercial Banking

- Run workshops with business, operations and IT teams to agree who does each step, and take processes through review and sign-off.
- Define roles, responsibilities and approval points so each team knows its part in the process.
- Built a standard process analysis template so reviews look and run the same way across processes.
- Map client journeys end to end, digital and manual, and break them into value streams and processes.
- Build current- and future-state models to show where work stalls, where controls are weak and what should change.
- Write SOPs across the client lifecycle, from onboarding and servicing through to account closure.
- Model processes in BPMN, from the value stream down to step-by-step work instructions.
- Build regulatory checks and controls into processes, including FICA, CDD and EDD.
- Check process changes with Risk and Compliance so they stay within the bank's regulatory controls.
- Use process data to spot bottlenecks, slow turnaround times and SLAs at risk.
- Document which systems support each step and where work moves between systems.
- Spot manual steps that could be automated, and write the business cases and user stories for them.
- Write requirements and acceptance criteria for system changes, and the UAT scenarios to test them.
- Give management a monthly update on progress.

Junior Business Analyst

Sep 2022 – Mar 2025

Sasfin Bank · Johannesburg

- Ran requirements and JAD workshops, and turned what the business needed into specs IT could build from.
- Wrote business requirements, user stories and acceptance criteria for IT projects.
- Documented process flows and wrote SOPs, user manuals and role definitions.
- Wrote test scenarios and test cases, logged the defects I found and reported results so the business could sign off.
- Helped teams adopt new processes and systems through change support and clear documentation.
- Worked with Operations, Technology, Risk and Compliance, and applied FICA, CDD and EDD requirements to client processes.
- Used entity relationship diagrams to check that data stayed accurate across systems.

DATA & AUTOMATION

Advanced Excel · SQL · Power BI & DAX · Power Query · Python · Automation opportunities · Data quality

CERTIFICATIONS

Certified Data Management Professional, Associate
DAMA International · 2024

Business Systems Analysis
University of Cape Town · 2025

Agile Banking Professional Plus 4.0
Cornerstone Performance Solutions · 2023

EDUCATION

BSc Honours, Information Technology
Richfield Graduate Institute · 2026

BSc Computer Science & Informatics
University of Johannesburg · 2018

SHORT COURSES · UCT

Data Analysis (2025) · Data Science with Python (2025)

LANGUAGES

English · Xitsonga

Operations Specialist — Jan 2021 – Aug 2022

Bolt South Africa · Johannesburg

- Went through supply numbers and ride trends to find where performance was slipping.
- Collected and checked driver and ride data from internal systems before using it.
- Built dashboards and reports that gave the operations team and other stakeholders a clear view of what was happening.
- Looked into why driver engagement was dropping during a tough period in the market.
- Helped shape data-driven ideas to keep more drivers on the platform and run operations more efficiently.

Data Capturer — Feb 2020 – Sep 2020

Shell Energy · Johannesburg

- Moved paper records onto database systems so the data was accurate and easier to find.
- Checked entries for mistakes, fixed them quickly and noted where they came from.
- Kept an eye on how data was being captured and made changes to the workflow to cut down on errors.

Graduate Software Developer — Jan 2019 – Jan 2020

Infomage Rims Group

- Built features and fixed bugs in C#, SQL and Python, including updates that closed security gaps.
- Ran unit and integration tests to find and fix defects.
- Helped plan and gather requirements for the Skillzbook and Sigma7 learning platforms, making sure new features matched what users needed.
- Kept clear records of code changes and feature updates for the rest of the team.

Personal projects

FMCG Sales, Marketing & Profitability

Power BI · DAX · Power Query · Star schema · Forecasting

A six-page Power BI report showing where a consumer goods business makes and loses money, using 18,240 order lines from 17 countries over three years. I wrote the business questions first as six case studies, and checked the numbers against the source data 12 different ways before reporting anything.

$14.45M net revenue · **22.9%** profit margin · **12/12** checks reconciled

HR Attrition Analytics

Power BI · DAX · Power Query · Star schema · BRD & user stories

A three-page Power BI report on why 237 of 1,470 employees left. I ran it like a work project: a BRD and user stories first, then the data model, then recommendations for HR. Overtime stood out. 30.5% of people working overtime left, compared with 10.4% of those who didn't.

16.1% attrition rate · **1,470** employees · **~84** leavers avoidable
